AIR-CONDITIONED
COMFORT**

Puron™

MAKING THE MOST OF A NATURALLY BEAUTIFUL LIFE

CARRIER HAS PIONEERED THE USE OF A 'GREEN' REFRIGERANT CALLED PURON, IN ADVANCE OF ANY TREND IN EUROPEAN LEGISLATION ON GLOBAL WARMING.

PURON IS NON-OZONE-DEPLETING, SO IT IS HARMLESS TO THE ENVIRONMENT.

MENT THAN ANY

OTHER REFRIGERANT. USING PURON HAS MADE IT POSSIBLE FOR CARRIER TO PRODUCE NEW AIR-CONDITIONING SYSTEMS WHICH ARE BOTH QUIETER AND MORE ENERGY-EFFICIENT.

PURON MAKES SIGNIFICANT IMPROVEMENTS POSSIBLE

COMFORT ALL-YEAR-ROUND

Whatever the season, you can enjoy superior comfort inside whatever the temperature or humidity levels outside.

SILENT

By using state-of-the-art fans and noise-insulation in clever configurations, Carrier is able to contain operational noise more effectively. The result is virtually silent.

COMPACT

Puron makes it possible to reduce the dimensions of each unit without sacrificing anything in the process. In fact, performance is enhanced.

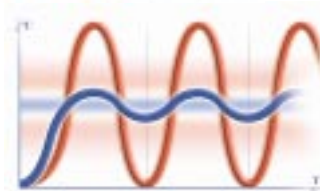

ENERGY SAVINGS

Thanks to Puron, improved energy-efficiency results in significantly reduced electricity bills. In other words, improved comfort actually costs you less.

REDUCES RUNNING COSTS BY UP TO 40%

 INVERTER

The variable speed capability maintains the pre-selected temperature with maximum efficiency, minimum waste.

This 'intelligent' system can save you significant amounts on your electricity bills. Tests have shown that the Inverter consumes up to 40% less electricity than traditional

alternatives. The Hybrid DC Inverter achieves this by using a clever combination of functions - Pulse Amplitude Modulation (PAM) and Pulse Width Modulation (PWM). PAM provides rapid power to reach the temperature that you have selected. PWM then maintains that temperature with maximum efficiency. In this way, the variable speed compressor delivers continuous comfort, with lower power consumption.

A single unit located outside can provide air-conditioning for two rooms.

SOLUTIONS FOR ALL SITUATIONS

The Night & Day console provides excellent air quality, under the most challenging conditions.

Its high performance filters can cope with everything from cooking odours to cigarette smoke. Its compact dimensions mean the console can be mounted in a variety of different positions low on the wall, on the ceiling, under a window, with no refurbishment required.

night & day

everyday

There is no need for any refurbishment when you choose the EveryDay hiwall.

It is easy to fit because it is lighter and more compact than conventional alternatives. The Inverter system provides quality comfort all year round, with substantial electricity savings thanks to its variable speed compressor.

The all-in-one Holiday portable combines an efficient dehumidifier with an excellent air conditioner in a single unit. The design delights the eye with its sleek lines and its unusually low noise level contributes to a highly satisfactory dual-purpose solution. Convenient and cost-effective it can enhance the quality of your life by providing cooling/heating and dehumidifying wherever you want it. The unit is so light you can easily wheel it from one room to another.

holiday

i-day

The I-Day cassette incorporates the best of earlier generations in a new and improved unit. It is even quieter than before and even more efficient, with superior four-way air-flow distribution. If your shop is suitable for a false ceiling, this unit is exactly what you need.
