

Small format, Strong impression

Innovation for Convenience Stores

Make the most out of your
convenience store space

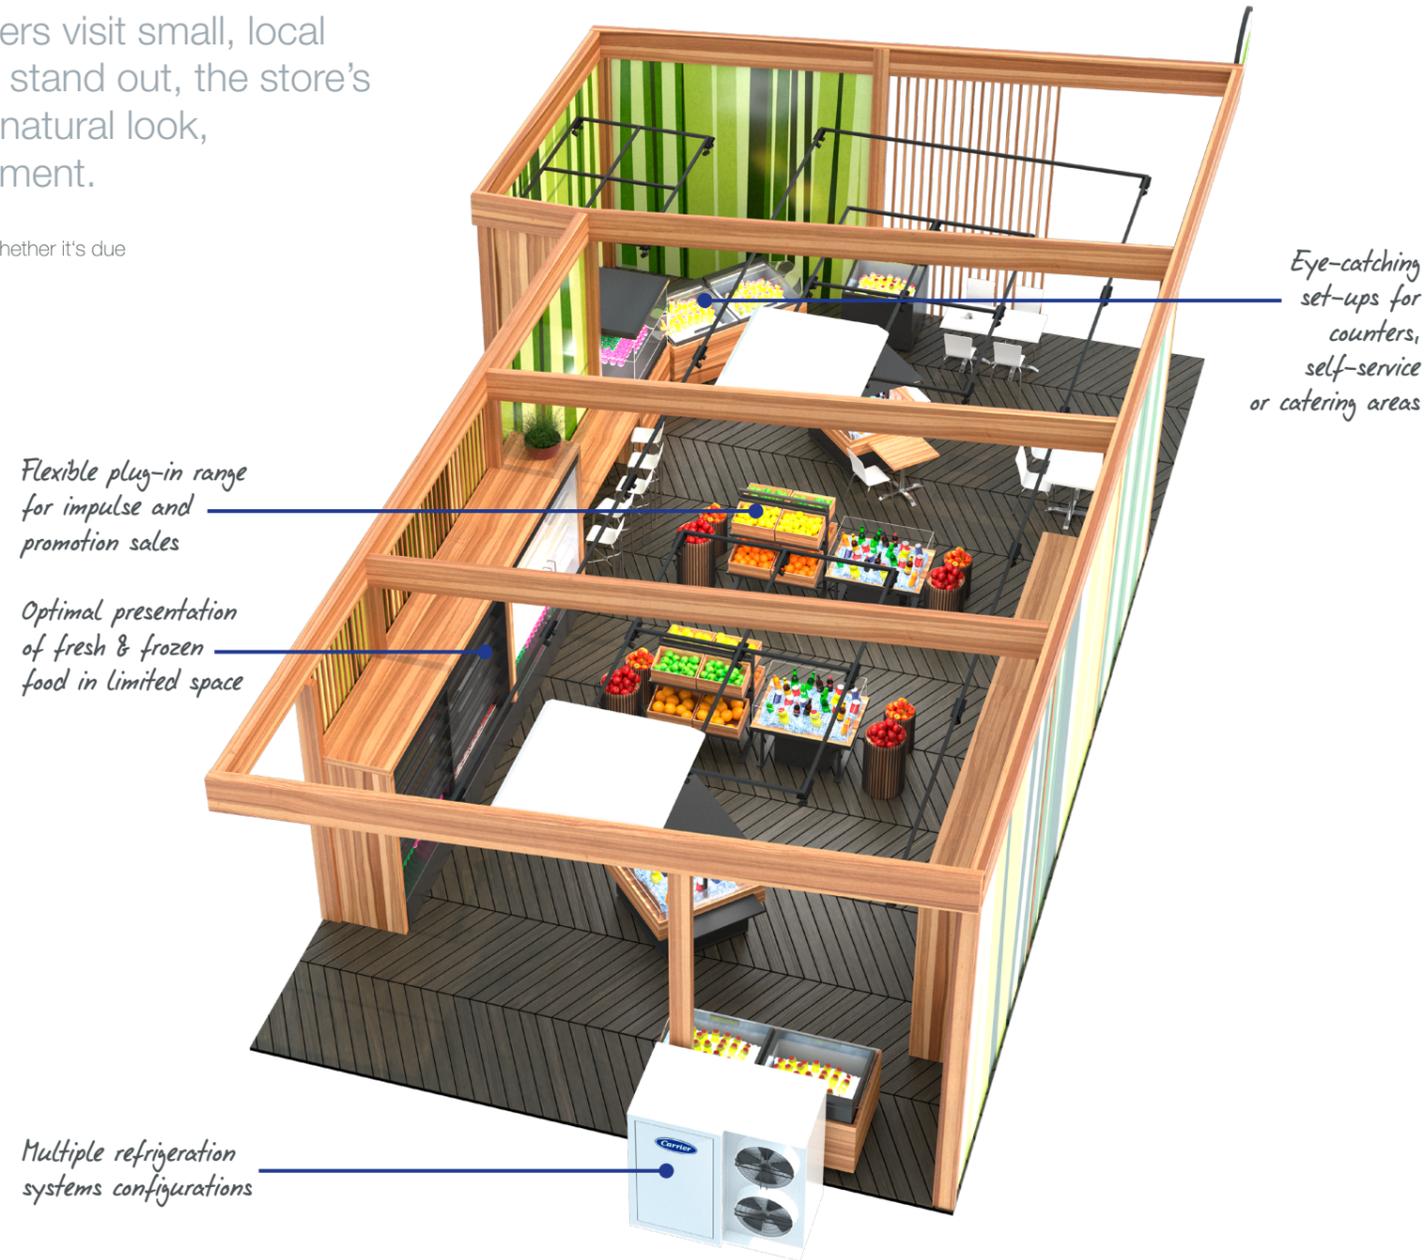

- Reduced floor space cabinets
- Flexible layout for multiple applications
- Harmonized design within sections
- Adaptable mechanical systems

Flexible in layout – harmonized in design

Everyday throughout Europe, consumers visit small, local stores because they're convenient. To stand out, the store's design needs to display an engaging, natural look, with fully integrated refrigeration equipment.

Size, location and building type place limits on the solutions available – whether it's due to space, noise, heat emissions, or aesthetics for example.

Design thought for small shop floors

Maximized display area

Range of remote cabinets with heights up to 2,2 m offering a large product display for diversified product assortments. To further optimize the floor space, the cabinets are available in **narrow versions** which offer considerable floor space efficiency optimization for convenience stores.

The **new E6 Velando® 53** features an inside depth of 490 mm, an outside depth of 765 mm, -190 mm compared to the standard version.

Eased circulation

Carrier's Methos glass door cabinet is now available with **400 mm transparent doors**. A dimension that offers easier product accessibility and improved circulation in the alleys.

Flexible catering areas

Integrate all functions within reduced floor spaces. The flexible range of small counters and islands allows for **flexible configurations** of your shops: **serve-over, self-service** - that can even melt into a **real restaurant area** within your shops for hungry consumers. Eye-catching set-ups from a self-service salad bar, Danaos® counters for savory hot meal servings, a stylish pastry tower for your premium desserts or a timeless Premor® island with delicious ice-creams can be part of the composition.

Boost your sales with convenience food

Transparency helps to improve impulse sales. Carrier proposes **highly transparent** small sized islands: the plug-in Areor® islands and its stepped version and the see-through ServiGo island - perfect for quick buys such as fresh pre-packaged foods, sandwiches or fruit-juices, to be grabbed on the go.

Homogeneous chiller & freezer sections

Line-up chillers & freezers in small spaces

Limited space can require chillers and freezers to be placed side by side; the **harmonized dimensions** and **uniform design** of the cabinets make this possible.

Carrier has everything that is needed for refrigeration in a small space: **open display cabinets**, display cabinets with single or double-glazed doors and freezers – with a **variety of lengths and depths** for the ideal adaptation of the cabinets to any given store dimensions.

Combine technologies

For shops with a high footfall and a limited sales area, flexibility in adjusting their sales assortment is a must. Existing remote installations can be flexibly **extended with a plug-in cabinet** without touching the remote refrigeration system. Remote cabinets and plug-in cabinets can be combined and lined-up allowing a **uniform attractive design** of the presentation area.

Create enhanced shopping atmospheres

The store's design is key to convey an engaging, natural look. Customized cabinet claddings will also prove how refrigeration equipment can adapt, melt into and actually add on to a shop's specific atmosphere. Carrier offers a wide range of harmonized wood claddings for counters and plug-in islands to create this special atmosphere.

Efficient operation and easy installation

Carrier offers its complete range with the high efficiency natural refrigerant, carbon dioxide.
