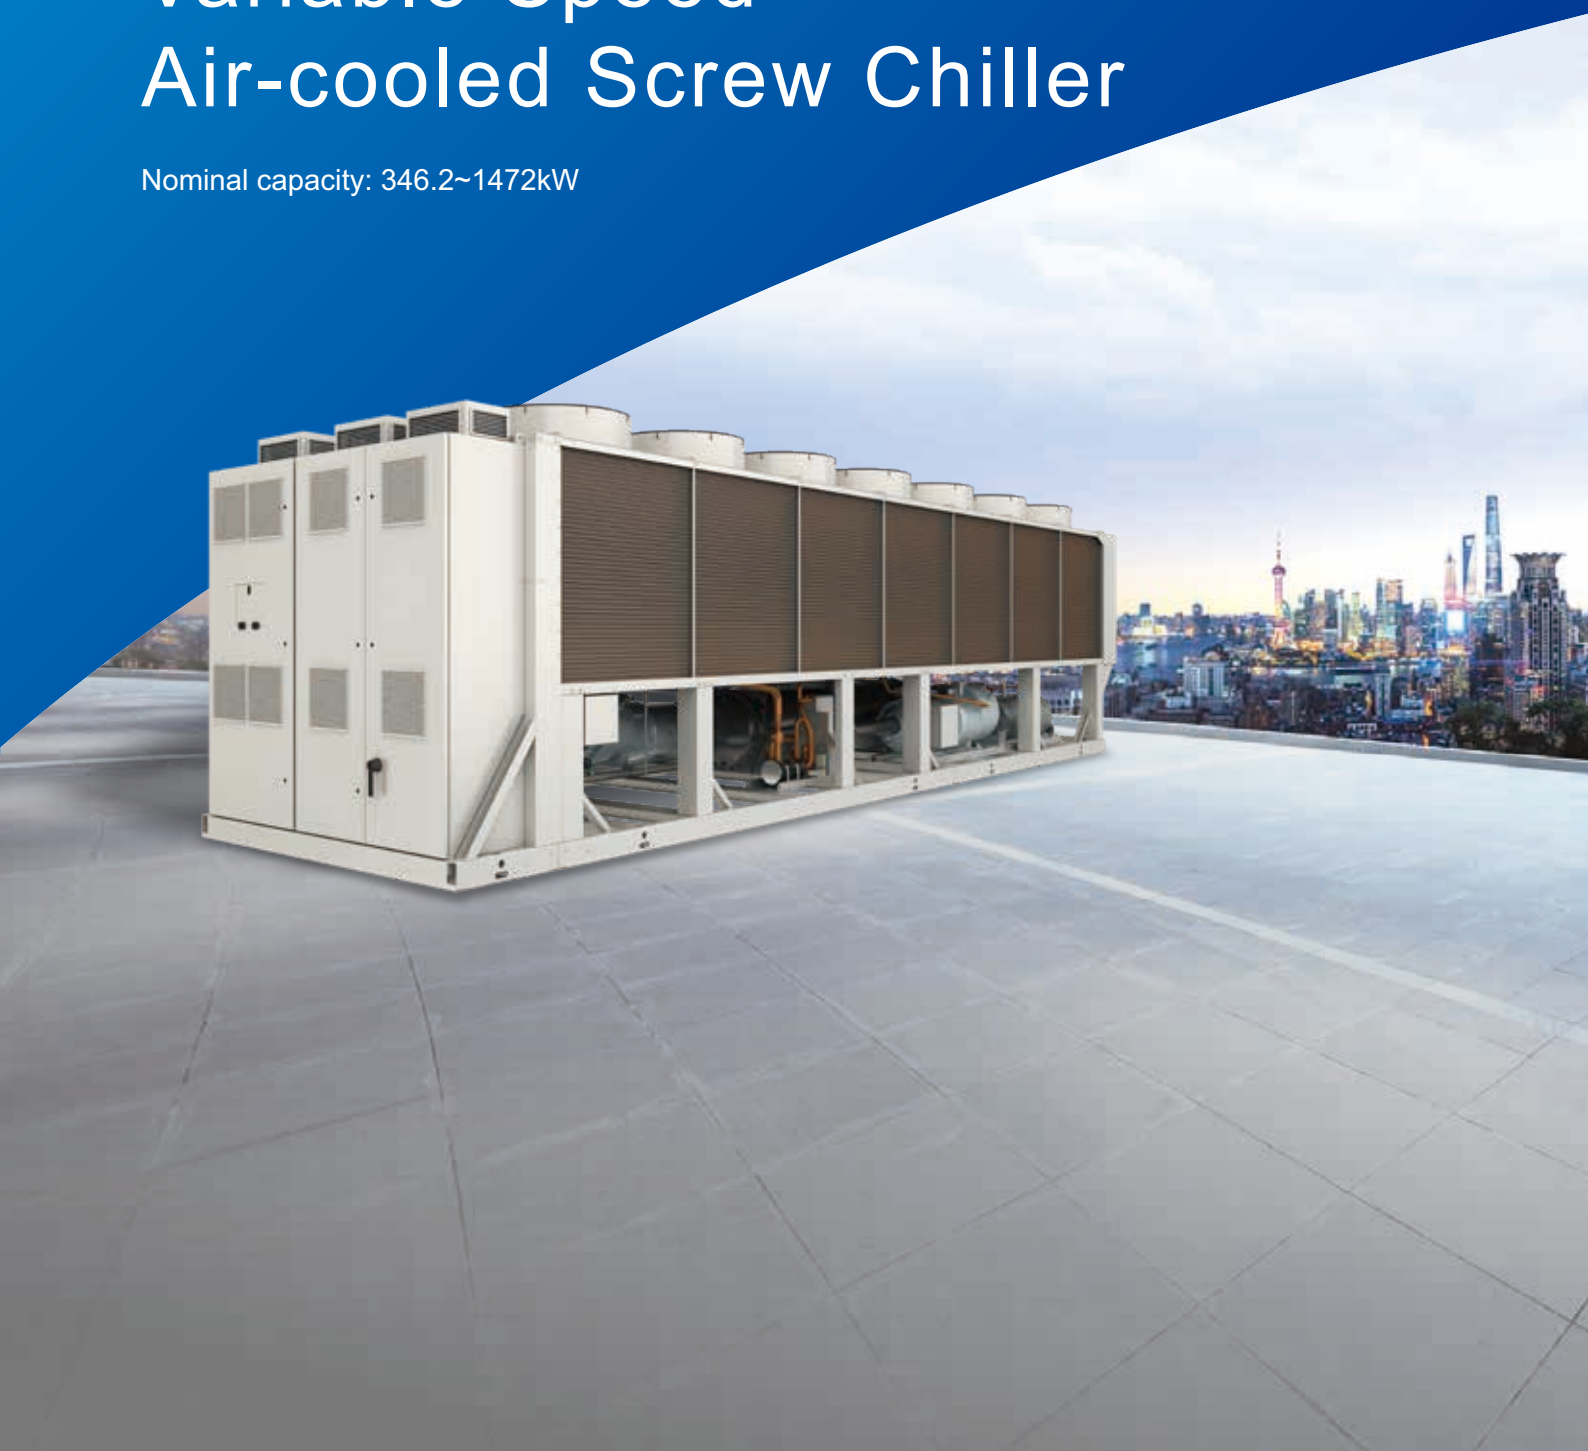
Carrier

greenspeed AQUAFORCE™

30KAV
Variable Speed
Air-cooled Screw Chiller

Nominal capacity: 346.2~1472kW



In 1998, Time magazine named Dr. Carrier one of its 20 most influential builders and titans of the 20thcentury.

Carrier is a leading global provider of innovative HVAC, refrigeration, fire, security and building automation technologies. Supported by the iconic Carrier name, the company's portfolio includes industry-leading brands such as Carrier, Kidde, Edwards, LenelS2 and Automated Logic. Carrier's businesses enable modern life, delivering efficiency, safety, security, comfort, productivity and sustainability across a wide range of residential, commercial and industrial applications.

Nomenclature

30KAV1100 A PT002B

Unit option

PT001	Cu/Cu coil
PT002B	Blygold PoluAL
PT003A	Pretreated Coating (Gold Fin)
PT005	Brine option（part models*）
PT303	Pretreated Coating (Blue Fin)
PT010F	Fixed speed fan
PT012	High Static Fan
PT015	Hard sound insulation cover（part models）
PT015S	Low noise level (Compressor sound jacket)
PT015LS	Ultra-low noise option（part models）
PT020A	IP54 Control Box
PT041A	Evaporator Anti-Freeze Protection
PT050	Total heat recovery option（part models**）
PT060	460V-3Ph-60Hz
PT061	380V-3Ph-60Hz
PT071	High efficiency
PT093A	Compressor discharge valves
PT104	1.6Mpa evporatior
PT107	Reversed Evaporator Connection
PT148B	J-Bus Gateway
PT148C	Bacnet Gateway
PT148D	LonTalk Gateway
PT156	Energy Management Module
PT158A	7" Touch Screen
PT275	Remote controller
PT281	Evaporator with aluminum jacket
PT282	EMC Classification C2
PT299	38mm Evaporator Insulation
PT301	Lead/lag control
PT305A	Spring damping
PT309D	Isolate valve for saftey valve(dual safety valve)
PT312A	Australian PV code

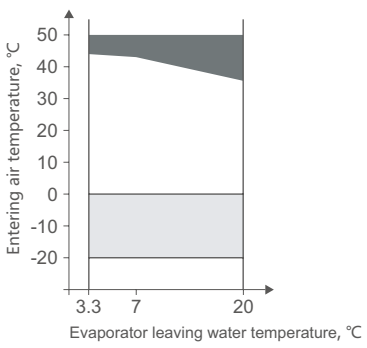
Design Series

Unit Model Air-cooled Variable Speed Screw chiller 30KAV0351A-1500A

*single circuit: 30KAV0351-0901 dual circuit:30KAV0550-1100
**30KAV0351 30KAV0551 30KAV0751 30KAV1000

Operating Range

Evaporator		Min. temperature	Max. temperature
Entering water temperature (at start)	℃	-	45
Entering water temperature (operating)	℃	6.8	26
Leaving water temperature (operating)	℃	3.3	20
Condenser		Min. temperature	Max. temperature
Outdoor air temperature	℃	-20	50



Below 0℃ air tempature the unit must either be equipped with evaporator frost protection option (PT041A), or the water loop must be protected against frost by using a frost protection solution (by the installer).

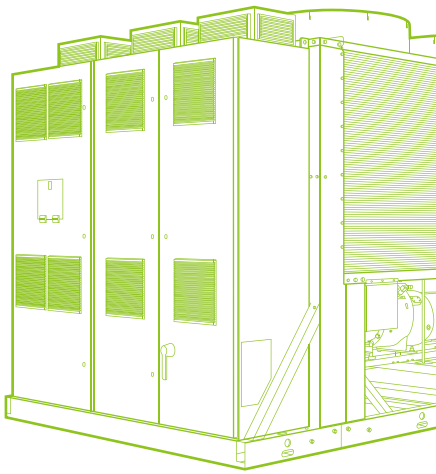
Part load average.

Introduction

- The Aquaforce chillers that apply zero ozone depletion potential HFC-134a refrigerant with Greenspeed™ Intelligence are the premium solution for commercial and industrial applications where installers, consultants and building owners require superior reliability and optimal performances, especially at part load.

- 30KAV are designed to meet current and future requirements in terms of energy efficiency, versatility and operating sound levels. Through the optimised combination of proven best-in-class technologies that include:
  - Exclusive new screw compressors with Greenspeed™ Intelligence.
  - Carrier® Smartvu™.
  - Condenser fans with Greenspeed™ Intelligence.

Low Energy Consumption

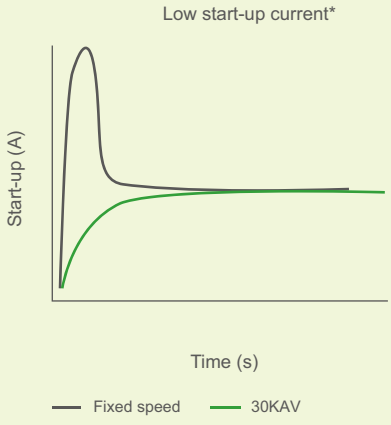


- The air conditioning system could use 30%~40% of anual buidling engery consumption, 30KAV helps customer involved in green building certification with Greenspeed® inveter - driven technology.

- With advanced unit mounted inverter-driven technolgy, the 30KAV is designed for high performance both at full load and at part load. Exceptional efficiency performance at part load which is up to 5.8, customer even can select PT071 (high efficiency) to achieve high performance and energy saving.

- Cooperating with primary viarable flow system, the system efficiency would be further enhanced by synchronized control of chillers and pumps.

- The high energy efficiency is reached thanks to:
  - Inverter driven twin-rotor screw compressors allowing precise capacity matching of buliding load and reducing unit power input, especially at part-load.
  - Inverter driven fan motors minimizing power consumption while granting optimum air flow.
  - Electronic expansion device permitting operation at a lower condensing pressure and improved utilization of the evaporator heat exchange surface.
  - Economizer system with electronic expansion device increases cooling capacity by 10% and efficiency by 4%.



*Based on Carrier data fitting

AHRI
Air-Cooled Chillers
AHRI Standards 550/590

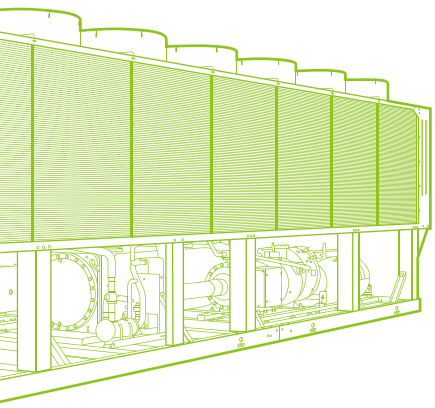
Absolute Reliability

- Screw compressors with Greenspeed™ Intelligence:
  - Industrial-type screw compressors with oversized bearings and motor cooled by suction gas.
  - Specifically sized inverter for each compressor motor ensures reliable operation and easy maintenance.
  - All compressor components assembly are easily accessible on site minimising down-time.

- Fans with Greenspeed™ Intelligence.
  - Fans equipped with inverter-driven asynchronous motors.
  - Specifically sized inverter optimize air flow management reducing cost.
  - Easily accessible inverter of fan speed control for easy service.

- Brine option design:
  - Apply certain concentration of ethylene glycol or propylene glycol and evaporator leaving water temperature can reach -6℃
  - Reducing tubes in evaporator increase flow rate to ensure chiller stable operation even when the evaporator leaving water temperature is less than 0℃.

- Exceptional endurance tests.
  - Partnerships with specialised laboratories and use of limit simulation tools (finite element calculation) for the design of critical components.
  - Transport simulation test equivalent to 2000 km by truck under harsh conditions.
  - Salt mist corrosion resistance test in the laboratory for increased corrosion resistance.



Total Heat Recovery Application

- Carrier total heat recovery chillers can provide both cooling and hot water which can be widely used by customers like hotel, factory and etc.

- Both the evaporator and condenser of total heat recovery chiller which are designed in series and the multi-function valve ensures chiller stably producing hot water even under low ambient temperature.

- Fan stops running to reduce noise and improve chiller efficiency under total heat recovery module.

- Cost saving during lifetime with high integrated efficiency .
  - Saving investment of boiler and auxiliary equipment .
  - Free hot water and the fan stops to reduce consumption.

- One chiller can meet cooling and sanitary water demand simultaneously to save more useful space for user.

CERTIFIED®
ww.ahridirectory.org
and 551/591

Minimised Operating Sound Levels

- The inverter technology used for the compressor and fan motors minimises noise levels at part load operation. When the unit is delivering 25% for example, compressors and fans are running at minimum speed which implies lower noise.

- Standard unit features include:
  - Discharge dampers integrated in the oil separator (Carrier patent).
  - Condenser coils in W-shape with an open angle, allowing quieter air flow across the coil.
  - Low-noise fans made of a composite material (Carrier patent) do not generate intrusive low frequency noise.

General Features

New innovative smart control features:
- An intuitive and user-friendly, 4.3" colored interface (7" as option).
- Screen-shots with concise and clear information in local languages.
- Complete menu, customized for different users (end user, service personnel and Carrier-factory technicians).
- Easy access to the controller box with touch screen mounting to ensure legibility under any lighting conditions.
- Safe operation and unit setting: password protection ensures that unauthorized people cannot modify any advanced parameters.
- Simple and “smart” intelligence uses data collection from the constant monitoring of all machine parameters to optimise unit operation.
- Night-mode: Cooling capacity management for reduced noise level.
- Multiple protocols: BACnet IP & MSTP, Modbus IP & RTU, LON Talk, J-Bus are supported (BAcnet IP/Modbus IP as standard).

Economical operation

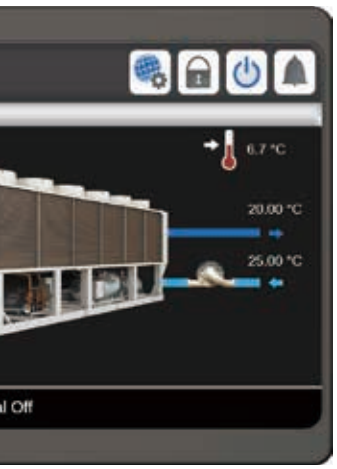
Energy management:
- Internal time schedule clock controls chiller on/off times and opera tion at a second set-point.
- The DCT (Data Collection Tool) records the alarms history to simplify and facilitate service operations.

Remote Management (Standard)

- Units with Carrier® SmartVu™ control can be easily accessed from the internet, using a PC with an Ethernet connection. This makes remote control quick and easy and offers significant advantages for service operations.
- Equipped with an RS485 serial port that offers multiple remote control, monitoring and diagnostic possibilities. When networked with other Carrier equipment through the CCN (Carrier Comfort Network - proprietary protocol), all components form a HVAC system fully-integrated and balanced through one of the Carrier’s network system products, like the Chiller System Manager or the Plant System Manager (optional). also communicates with other building management systems viaoptional communication gateways.

Quiet operation

- The following commands/visualizations are possible from remote
  - Start/Stop of the machine.
  - Dual set-point management: Through a dedicated contact is possible to activate a second set-point (example: unoccupied mode).
  - Demand limit setting: To limit the maximum chiller capacity to a predefined value.
  - Water pump control: These outputs control the contactors of one/two evaporator water pumps.
  - Operation visualization: Indication if the unit is operating or if it's in stand-by (no cooling load).
  - Alarm visualization.



Absolute reliability

- The Energy Management Module (EMM) offers extended remote control possibilities:
  - Room temperature: Permits set-point reset based on the building indoor air temperature (if Carrier thermostat are installed).
  - Set-point reset: Ensures reset of the cooling set-point based on a 4-20 mA or 0-10 V signal.
  - Demand limit: Permits limitation of the maximum chiller power or current based on 0-10 V signal.
  - Demand limit 1 and 2: Closing of these contacts limits the maximum chiller power or current to two predefined values.
  - User safety: This contact can be used for any customer safety loop; opening the contact generates a specific alarm.
  - Ice storage end: When ice storage has finished, this input permits return to the second set-point (unoccupied mode).
  - Time schedule override: Closing of this contact cancels the time schedule effects.
  - Out of service: This signal indicates that the chiller is completely out of service.
  - Chiller capacity: This analogue output (0-10 V) gives an immediate indication of the chiller capacity.
  - Alert indication: This volt-free contact indicates the necessity to carry out a maintenance operation or the presence of a minor fau.
  - Compressors running status : Set of outputs (as many as the compressors number) indicating which compressors are running.

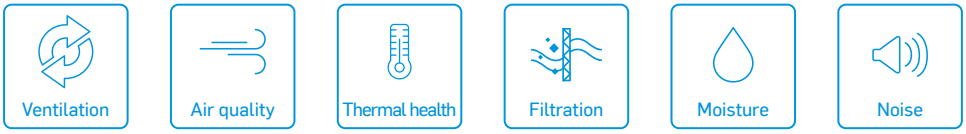
HEALTHY**BUILDINGS**

As the inventors of modern air conditioning and a world leader in HVAC, refrigeration, and fire and security, solutions, Carrier has a legacy of creating safe and comfortable buildings. Our Healthy Buildings Program builds on that legacy through in-depth expertise and a holistic suite of healthy building technologies and services .to address the immediate pandemic concerns and long into the future.

6 of 9 foundations of healthy building are related closely to air conditioning system.



Primary support for the study came from Carrier.
MacNaughton P, Allen J, Satish U, Laurent J, Flanigan S, Vallarino J, Coull B, Spengler. 2016. The Impact of Working in a Green Certified Building on Cognitive Function and Health. Building and Environment DOI: 10.1016/j.buildenv.2016.11.041
