

30KAV Variable Speed Air-cooled Screw Chiller

Nominal cooling capacity: 550~1100kW

Turn To The Experts

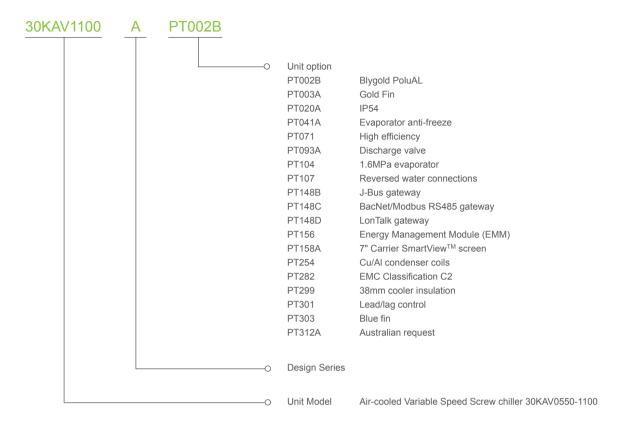

Carrier is a leading global provider of innovative HVAC, refrigeration, fire, security and building automation technologies.

Supported by the iconic Carrier name, the company's portfolio includes industry-leading brands such as Carrier, Kidde, Edwards, LenelS2 and Automated Logic.

Carrier's businesses enable modern life, delivering efficiency, safety, security, comfort, productivity and sustainability across a wide range of residential, commercial and industrial applications.

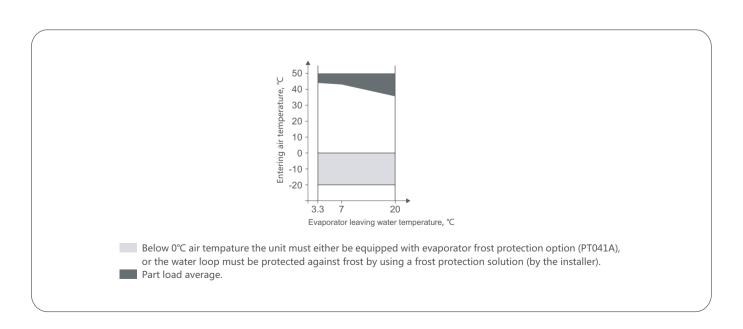

Nomenclature

Operating Range

Evaporator	Min. temperature	Max. temperature
Entering water temperature (at start) °C	-	45
Entering water temperature (operating) °C	6.8	26
Leaving water temperature (operating) °C	3.3	20
Condenser	Min. temperature	Max. temperature
Outdoor air temperature °C	-20	50

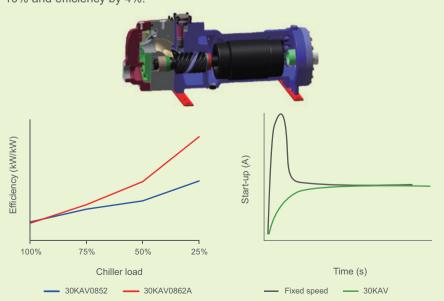

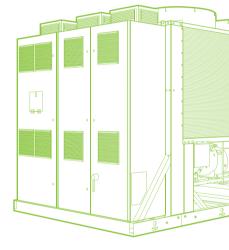

Introduction

- The Aquaforce chillers with Greenspeed[®] Intelligence are the premium solution for commercial and industrial applications where installers, consultants and building owners require superior reliability and optimal performances, especially at part load.
- 30KAV are designed to meet current and future requirements in terms of energy efficiency, versatility and operating sound levels. Through the optimised combination of proven best-in-class technologies that include:
 - Exclusive new screw compressors with Greenspeed® Intelligence.
 - The new Touch Pilot control.
 - 6th flying bird Condenser fans with Greenspeed® Intelligence.
- Furthermore, with 30KAV, Carrier offers its unique expertise and know-how to take care of the machine long after the sale. With the new "CARRIER CONNECT" system in fact, energy and facility managers and end-users in general can rely on the most qualified remote monitoring services.

Low Energy Consumption

- The air conditioning system could use 30%~40% of anual building engery consumption, 30KAV helps customer involved in green building certification with Greenspeed® inveter - driven technology.
- With advanced unit mounted inverter-driven technolgy, the 30KAV is designed for high performance both at full load and at part load. Exceptional efficiency performance at part load which is up to 5.69, customer even can select PT071 (high efficiency) to achieve high performance and energy saving.
- Cooperating with primary viarable flow system, the system efficiency would be further enhanced by synchronized control of chillers and pumps.
- The high energy efficiency is reached thanks to:
 - Inverter driven twin-rotor screw compressors allowing precise capacity matching of bullding load and reducing unit power input, especially at part-load.
 - Inverter driven fan motors minimizing power consumption while granting optimum air flow
 - Electronic expansion device permitting operation at a lower condensing pressure and improved utilization of the evaporator heat exchange surface.
 - Economizer system with electronic expansion device increases cooling capacity by 10% and efficiency by 4%.

Environmental Friendly

- HFC-134a refrigerant Refrigerant of the HFC group with zero ozone depletion potential.
- Leak-tight refrigerant circuit. Reduction of leaks as no capillary tubes and flare connections are used. Verification of pressure transducers and temperature sensors without transferring refrigerant charge.

Absolute reliability

- Industrial-type screw compressors with oversized bearings and motor cooled by suction gas.
- Specifically sized inverter for each compressor motor ensures reliable operation and easy maintenance.
- All compressor components assembly are easily accessible on site minimising down-time.
- Fans with Greenspeed® Intelligence.
 - 6th generation of Flying Bird fans equipped with inverter-driven asynchronous motors.
 - Specifically sized inverter optimize air flow management reducing cost.
 - Easily accessible inverter of fan speed control for easy service.

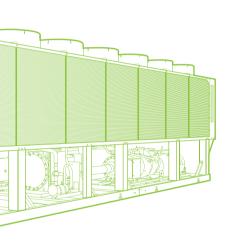

Exceptional endurance tests.

- Partnerships with specialised laboratories and use of limit simulation tools (finite element calculation) for the design of critical components.
 - Transport simulation test equivalent to 2000 km by truck under harsh conditions.
 - Salt mist corrosion resistance test in the laboratory for increased corrosion resistance.

Minimised Operating Sound Levels

- The inverter technology used for the compressor and fan motors minimises noise levels at part load operation. When the unit is delivering 25% for example, compressors and fans are running at minimum speed which implies lower noise.
- Standard unit features include:
 - Discharge dampers integrated in the oil separator (Carrier patent).
 - Condenser coils in W-shape with an open angle, allowing quieter air flow across the coil.
 - Low-noise 6th generation Flying Bird fans, made of a composite material (Carrier patent) which do not generate intrusive low frequency noise.

and 551/591

General Features

- New innovative smart control features:
 - An intuitive and user-friendly, 4.3" colored interface (7" as option).
 - Screen-shots with concise and clear information in local languages.
 - Complete menu, customized for different users (end user, service personnel and Carrier-factory technicians).
 - Easy access to the controller box with touch screen mounting to ensure legibility under any lighting conditions.
 - Safe operation and unit setting: password protection ensures that unauthorized people cannot modify any advanced parameters.
 - Simple and "smart" intelligence uses data collection from the constant monitoring of all machine parameters to optimise unit operation.
 - Night-mode: Cooling capacity management for reduced noise level.
 - Multiple protocols: BACnet IP & MSTP, Modbus IP & RTU, LON Talk, J-Bus are supported (BAcnet IP/Modbus IP as standard).

Economical operation

- Energy management:
 - Internal time schedule clock controls chiller on/off times and opera tion at a second set-point.
 - The DCT (Data Collection Tool) records the alarms history to simplify and facilitate service operations.

Remote Management (Standard)

- Units with Carrier SmartView[™] control can be easily accessed from the internet, using a PC with an Ethernet connection. This makes remote control quick and easy and offers significant advantages for service operations.
- Equipped with an RS485 serial port that offers multiple remote control, monitoring and diagnostic possibilities. When networked with other Carrier equipment through the CCN (Carrier Comfort Network proprietary protocol), all components form a HVAC system fully-integrated and balanced through one of the Carrier's network system products, like the Chiller System Manager or the Plant System Manager (optional). also communicates with other building management systems viaoptional communication gateways.

Quiet operation

- The following commands/visualizations are possible from remote
 - Start/Stop of the machine.
 - Dual set-point management: Through a dedicated contact is possible to activate a second set-point (example: unoccupied mode).
 - Demand limit setting: To limit the maximum chiller capacity to a predefined value.
 - Water pump control: These outputs control the contactors of one/two evaporator water pumps.
 - Operation visualization: Indication if the unit is operating or if it's in stand-by (no cooling load).
 - Alarm visualization.

Absolute reliability

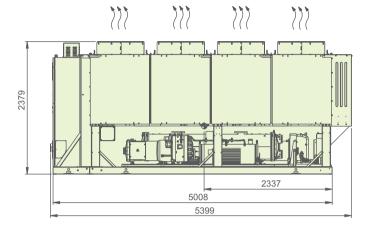

- The Energy Management Module (EMM) offers extended remote control possibilities:
 - Room temperature: Permits set-point reset based on the building indoor air temperature (if Carrier thermostat are installed).
 - Set-point reset: Ensures reset of the cooling set-point based on a 4-20 mA or 0-10 V signal.
 - Demand limit: Permits limitation of the maximum chiller power or current based on 0-10 V signal.
 - Demand limit 1 and 2: Closing of these contacts limits the maximum chiller power or current to two predefined values.
 - User safety: This contact can be used for any customer safety loop; opening the contact generates a specific alarm.
 - Ice storage end: When ice storage has finished, this input permits return to the second set-point (unoccupied mode).
 - Time schedule override: Closing of this contact cancels the time schedule effects.
 - Out of service: This signal indicates that the chiller is completely out of service.
 - Chiller capacity: This analogue output (0-10 V) gives an immediate indication of the chiller capacity.
 - Alert indication: This volt-free contact indicates the necessity to carry out a maintenance operation or the presence of a minor fau.
 - Compressors running status : Set of outputs (as many as the compressors number) indicating which compressors are running.

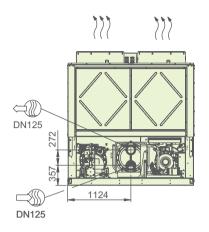

Performance data

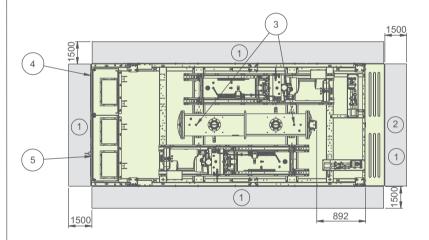

Model	30KAV	0550A	0660A	0700A	0800A	0900A	1000A	1100A
