- RENTAL

Remote Monitoring for HVAC Equipment and Complete Building Systems

Protecting your investment

Heating, Ventilating and Air Conditioning (HVAC) Systems are one of the largest investments in any building. Protecting those investments are key to a successful building management strategy. Without 24 hour expert attention your system could be costing you far more than it should, not to mention increasing your risk of costly downtime, emergency repairs and uncomfortable occupants.

For over 100 years, Carrier has led the manufacture and servicing of HVAC systems. Carrier's expertise and specialist knowledge enable you to get exactly the service you need to ensure your equipment operates smoothly, efficiently and cost effectively. Combining our experience with today's most advanced communications technology enables Carrier to deliver a Remote Monitoring Service that will save you time and money, and provide peace of mind throughout the year.

Remote Monitoring

Carrier's Remote Monitoring System constantly analyses your assets via a real time connection. It can identify a potential problem before it occurs. The best course of action is confirmed automatically. This can reduce the need for an on-site service call. Adjustments can often be made remotely. This not only saves you money but also ensures that operation is continuous.

Any building, any system, anywhere 24 hours, 365 days

Regardless of your location, building type or system, Carrier can provide equipment monitoring that will detect problems earlier and remedy them sooner. A Remote Monitoring System is perfect for companies with multiple sites ensuring a maximum level of service to every building and providing a consolidated picture of your equipment assets.

Proactive Service

When on-site repairs are required, immediate access to the information specific to your site allows technicians to work faster and more effectively. If smaller problems are detected remotely, you can choose to schedule service calls to suit you. This minimises disruption to your facilities and occupants.

Reporting

Your Carrier Remote Monitoring Service will provide you with comprehensive reports generated from data being captured on a daily basis from your system. These reports can help identify efficiency levels, performance trends and energy saving opportunities.

Benefits Check List

- 24 hour attention 365 days of the year
- Maximum building protection
- Reduced risk of equipment failure
- Monitoring of Carrier and other manufacturers' systems
- Improved indoor air quality
- Refrigerant leak detection
- Equipment adjustments made remotely
- Improved equipment performance
- Reduced service call out costs
- Faster response when on-site service is needed
- Valuable operational data records
- Reports that identify cost saving opportunities
- Flexible, customised levels of service
- Options to suit your needs

Peak performance,
optimised efficiency and
reduced operating costs.

The Carrier Service Partnership

When you choose Carrier Remote Monitoring, you get much more than routine service. You can be sure that you have selected the industry experts, and qualified technicians that you can depend on 24 hours a day, 365 days a year. A Carrier Service Partnership will optimise your system performance, maximise your peace of mind and enhance your bottom line.
