

Enhance chiller performance with the new PIC 6 Control Panel Retrofit

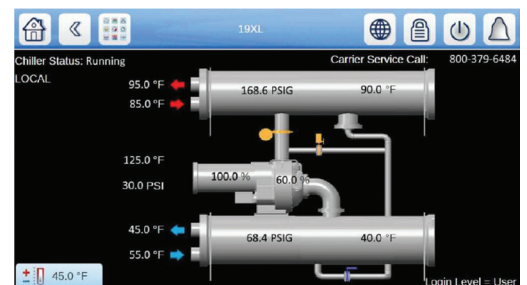

GET THE BENEFIT OF NEW TECHNOLOGY WITHOUT PURCHASING ALL-NEW EQUIPMENT

Carrier Product Integrated Control (PIC) Retrofits enhance the operating efficiency, monitoring capabilities and overall performance of entire HVAC systems.

You'll get the connectivity you crave and the superior Carrier service you expect. During installation, we can pinpoint any service issues you may be facing and provide ongoing recommendations over the lifecycle of your equipment, regardless of your system's age, existing protocols or manufacturer. Carrier service technicians have the knowledge and know-how to identify potential problems before they occur, saving you time and money.

Our PIC 6 control retrofit is a suitable replacement for all prior chiller PIC versions. PIC Retrofits update older chillers with the many benefits of Carrier Integrated Controls and are easily connected with most common building management systems. The new PIC 6 even has a faster start-up time to maximize your productivity. **What does that mean for you? Confidence in your equipment and its extended lifecycle.**

USER-FRIENDLY GRAPHIC INTERFACE

REAL-TIME DATA POINTS

PIC 6 ADVANTAGES:

- New, common control platform across entire chiller portfolio and more native connectivity options for controls supporting BACnet, MSTP and Modbus
- Prognostics to anticipate issues and stay ahead of repairs with 250 points for trending and monitoring
- Direct connection to the BluEdge™ Service Platform with increased security measures
- Increased 128MB RAM size means increased ability to store data points for predictive analysis
- Onboard service log to track service records
- Critical data, records and alarm history

Better performance is a retrofit away. Please visit carrier.com/service to learn more.
