

Carrier Commercial Healthy Building Solutions & Services

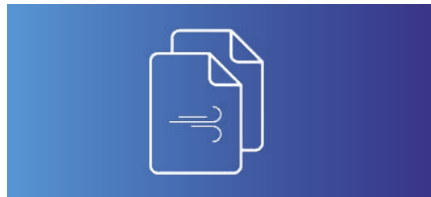

Carrier offers a suite of **Healthy Building Solutions & Services** that help deliver healthier, safer, more efficient, and more productive indoor environments. From building assessments and technology solutions that improve indoor air quality (IAQ), to maintenance and monitoring to support buildings throughout their lifecycle. Carrier's experts will work closely with you to assess, upgrade, maintain, and sustain your buildings to help protect what's most important – the health of those inside.

Our **Healthy Building Solutions & Services** include:

Building IAQ Assessments

There are a variety of IAQ and ventilation solutions to choose from - but not every solution fits every building's needs. To determine which solutions best meet your building's needs, Carrier provides IAQ assessments. Assessments can be customized to each building or follow a prescriptive assessment approach and include monitoring and testing.

Building Solutions

After the building assessment, a Carrier expert will review the assessment findings and recommendations with you. If a prior assessment was completed or is not needed, IAQ solutions and service recommendations will be provided based on your needs and budget. A building IAQ plan is then developed and implemented.

Building Protection Services

To help ensure the IAQ solutions implemented are effective long into the future, Carrier provides maintenance and monitoring options. Partnering with Carrier brings with it the security of knowing that every facet of your investment is being carefully monitored, analyzed, maintained and documented.

Healthy Building Solutions & Services

Building IAQ Assessment Options to test air quality and develop and implement upgrades to help ensure optimal filtration, ventilation, airflow, and controls.

Level II: Investigation Assessments help provide a deeper understanding of the buildings IAQ level using testing and sampling to improve building health.

Visual Assessments help identify IAQ goals with a building walk through and discussion of building operations. Visual assessments are best suited for single-sites and smaller buildings.

Level III: Comprehensive Assessments provides the most in-depth review of the building IAQ through testing, sampling and monitoring to help improve building health now, and an ongoing plan for the future.

Level I: Baseline Assessments help identify areas of the building that present potential health or safety risks. Baseline assessments provide findings for possible curative action and next steps.

Customized Assessments help you customize any solution to include as much or little effort, testing and examination that meets your facility goals.

Building Solutions to deliver healthier, safer, more efficient and productive indoor environments.

High-Efficiency Particulate Air (HEPA) filters are 99.97% efficient, helping to significantly reduce the presence of contaminants in the air.

Carrier's OptiClean™ unit helps clean contaminated air and prevent it from spreading to different sections of the building.

Anti-Microbial, Anti-Corrosion coil coating applications help to hinder the growth of pathogens and microorganisms on coils increasing efficiency of the coils.

UV-C Lighting technology emits energy which targets and damages air contaminants such as microorganisms, bacteria, viruses, mold, and other volatile contaminants on the coil and helps prolong equipment life.

IAQ Monitoring provides continuous monitoring to identify IAQ issues and help confirm the effectiveness of filtration and air purification in the building.

Electrostatic Filters use static electricity to catch particles as they pass through the filter and help protect buildings from harmful microscopic particles.

Carrier Rental Systems provides temporary Heating, Ventilation & Air-Conditioning (HVAC) equipment solutions to supplement, replace or have on stand-by to help reopen buildings quickly and safely, and meet ventilation and IAQ requirements.

Healthy Building Solutions & Services

Building Protection Services to help ensure high quality air by keeping the building's HVAC system properly maintained.

Carrier Equipment Start-Up helps ensure the HVAC equipment is properly started up and performs as designed, helping to ensure the building is ready for occupancy.

HVAC European Connected Services Portal provides remote visibility and valuable insight into key operating data, analyzing hundreds of parameters generated by connected equipment in real time, and monitors HVAC performance in BluEdge Command Centers.

Carrier BluEdge Service Plans help ensure HVAC equipment & indoor air and filtration systems are operating optimally and efficiently throughout the years. IAQ assessments and retrofits for upgraded filtration and controls can be included into service plans.

Carrier Building Management System to easily manage building and occupant comfort from a web browser or mobile device. Create schedules, view trends, alarms and custom reports to control energy savings and occupant comfort.

Leading the Way to a Healthier Future

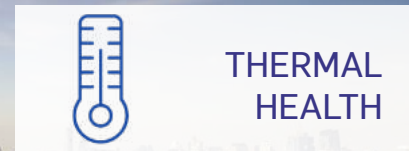

Carrier can help upgrade and operate your facilities with the appropriate package of solutions based on your industry application and requirements.
