

# It pays to be in control.

**Pause the ripening process and fast-forward your global business opportunities.**

The XtendFRESH™ system helps slow the ripening process by removing ethylene and simultaneously controlling CO<sub>2</sub> and O<sub>2</sub> levels in multiple combinations, so you can freshly transport bananas and a broader range of perishables to new markets in all corners of the globe. The exclusive option is modular and easy to install on existing Carrier container refrigeration units with Micro-Link® 3 controllers. Combine these financial benefits with expanded business opportunities, and it's clear that there are a bunch of reasons to Turn to the Experts™ at Carrier for the XtendFRESH system.
